A group of children get together to build a tree house. A developer decides to build a modern development house. The building of the two houses is cleverly intercut - the one, a simple world unto itself, the other a highly complex part of its community. Underlying both is man's continual desire for shelter, as a brief animated story of a caveman and woman seeking shelter shows us. From the cave to the split level, the technology of shelter has changed drastically. Today, if a builder forgets to attach his house to the wires and pipes of the outside community he is left with a shell.

330 Why Communities Trade Goods. Churchill films. (16mm, color, 10 minutes) (2-6)
Through this film, children can go for a trip in the cab of a large truck. On the way, they discover some of the reasons communities exchange goods. They see how the land changes from place to place, and how different kinds of land can produce different things. A mountain forest town produces lumber; a community in a flat valley produces food crops. To obtain the many things we use each day, communities must trade or "exchange" goods. (2-6)

330 Why People Have Special Jobs: The Man Who Made Spinning Tops. Learning Corporation of America. (16mm film, color, 7 min.)
This humorous film introduces the basic economic concept of specialization of labor. A man who lives in a primitive village makes a spinning top for his son. The other fathers want him to make tops for their children too, but the man does not have time because he must also fish and hunt to feed his family. When one of the fathers volunteers to supply the toymaker with fish in return for a gop, the other villagers realize that each man has a special job he can do best. The idea of specialization of labor is born. The film concludes by showing examples of specialized jobs today. (k-3)

330 Winn, Marie. The Man Who Made Fine Tops. Simon and Schuster, 1970. $3.07.

330 Why We Use Money: The Fisherman Who Needed a Knife. Learning Corporation of America. (16mm film, color, 8 min.) (k-3)
The amusing story of an ingenious fisherman introduces the basic concept of money and explains why it replaced barter. In a village where money does not exist, a fisherman finds he must go through a tiresome series of trades in order to get a new knife - exchanging his fish for a pot, the pot for a loaf of bread, the bread for a hat, and finally the hat for a knife. Exasperated, the fisherman has a brilliant thought; why not have everyone use one specific item for trading? The idea of money is born and its convenience explained. The film closes with a look at the uses of money today. (k-3)

336 Why We Have Taxes: The Town That Had No Policeman. Learning Corporation of America. (16mm film, color, 7 min.) (k-3)
A baffling problem arises in a little community. A thief has stolen the farmer's tomatoes, the clothesmaker's new suit, the housebuilder's wheelbarrow, and the shoemaker's sandals. Clearly a policeman is needed. But how will the policeman earn a living, since he has no goods of his own to sell? The clothesmaker thinks of a perfect solution: if everyone gives a little bit of money, the total amount will be enough to pay the policeman to work for the whole community. The simple idea of taxation to accomplish a common goal is born. The film concludes with examples of modern services provided by taxes. (k-3)

340 Why We Have Laws: Shiver, Gobble and Snore. Learning Corporation of America. (16mm film, color, 7 min.)
Using a humorous trio of characters, this film shows why rules are necessary, and goes on to develop the concept of laws. Because of the silly rules made by the kind of their land, Shiver is always cold, Gobble hungry, and Snore Sleepy. But when they escape to a place without rules, they find it impossible to live peacefully. So they make up a fair and sensible set of rules that satisfies them all. The film ends with a look at some important laws of today, pointing out how the people themselves have helped to make them. (k-3) (Selected for use at the 1970 White House Conference on Children.)
